A Study on Decision Making Using Fuzzy Decision Trees

Eero Lehtonen

23.2.2015

Ohjaaja: Matteo Brunelli

Valvoja: Raimo P. Hämäläinen

Työn saa tallentaa ja julkistaa Aalto-yliopiston avoimilla verkkosivuilla. Muilta osin kaikki oikeudet pidätetään.

Background

- Precise representation of scenarios in decision making might not adequately represent imprecision
- Fuzzy set theory useful in reasoning about vague quantities
- Specifically study fuzzy extensions to decision trees

Characteristic and membership functions

- Fuzzy set theory often viewed as an extension of classical (crisp) set theory
- Membership function as an extension of the characteristic function

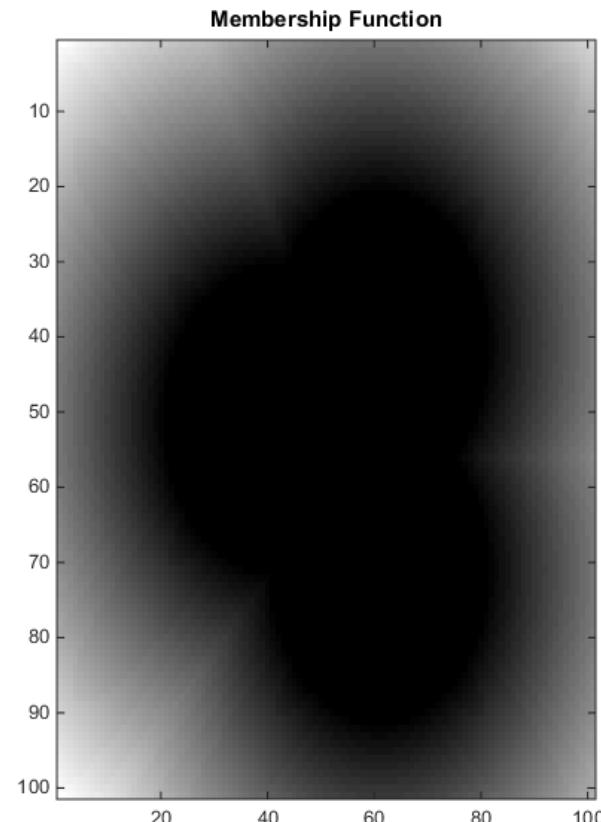

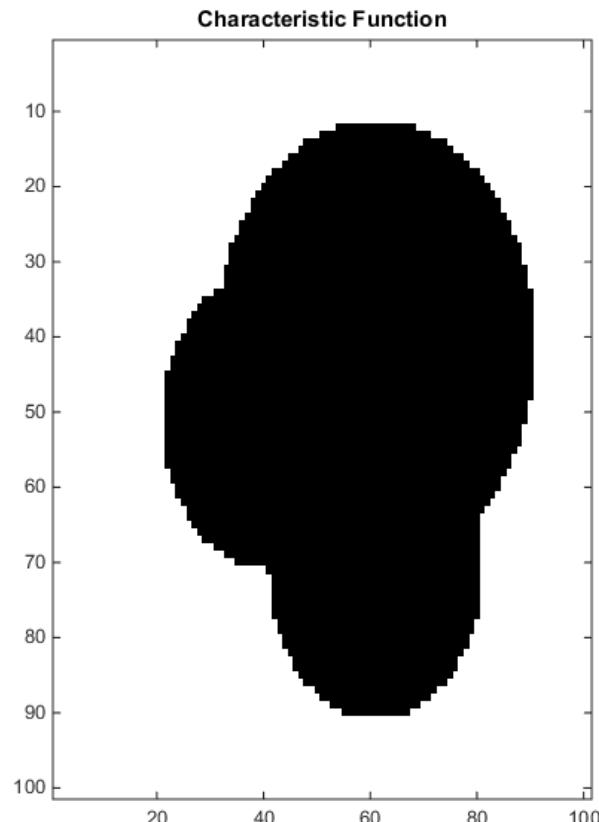

Characteristic function

$$A : X \rightarrow \{0,1\}$$

Membership function

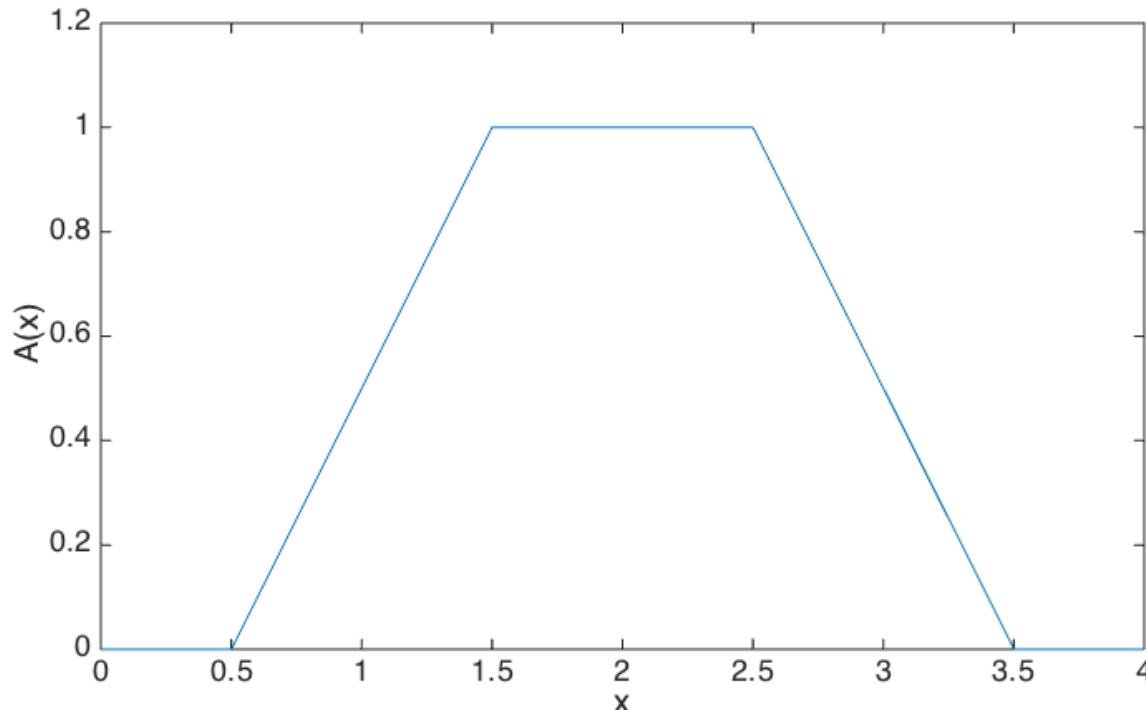

$$A : X \rightarrow [0,1]$$

Crisp and Fuzzy sets

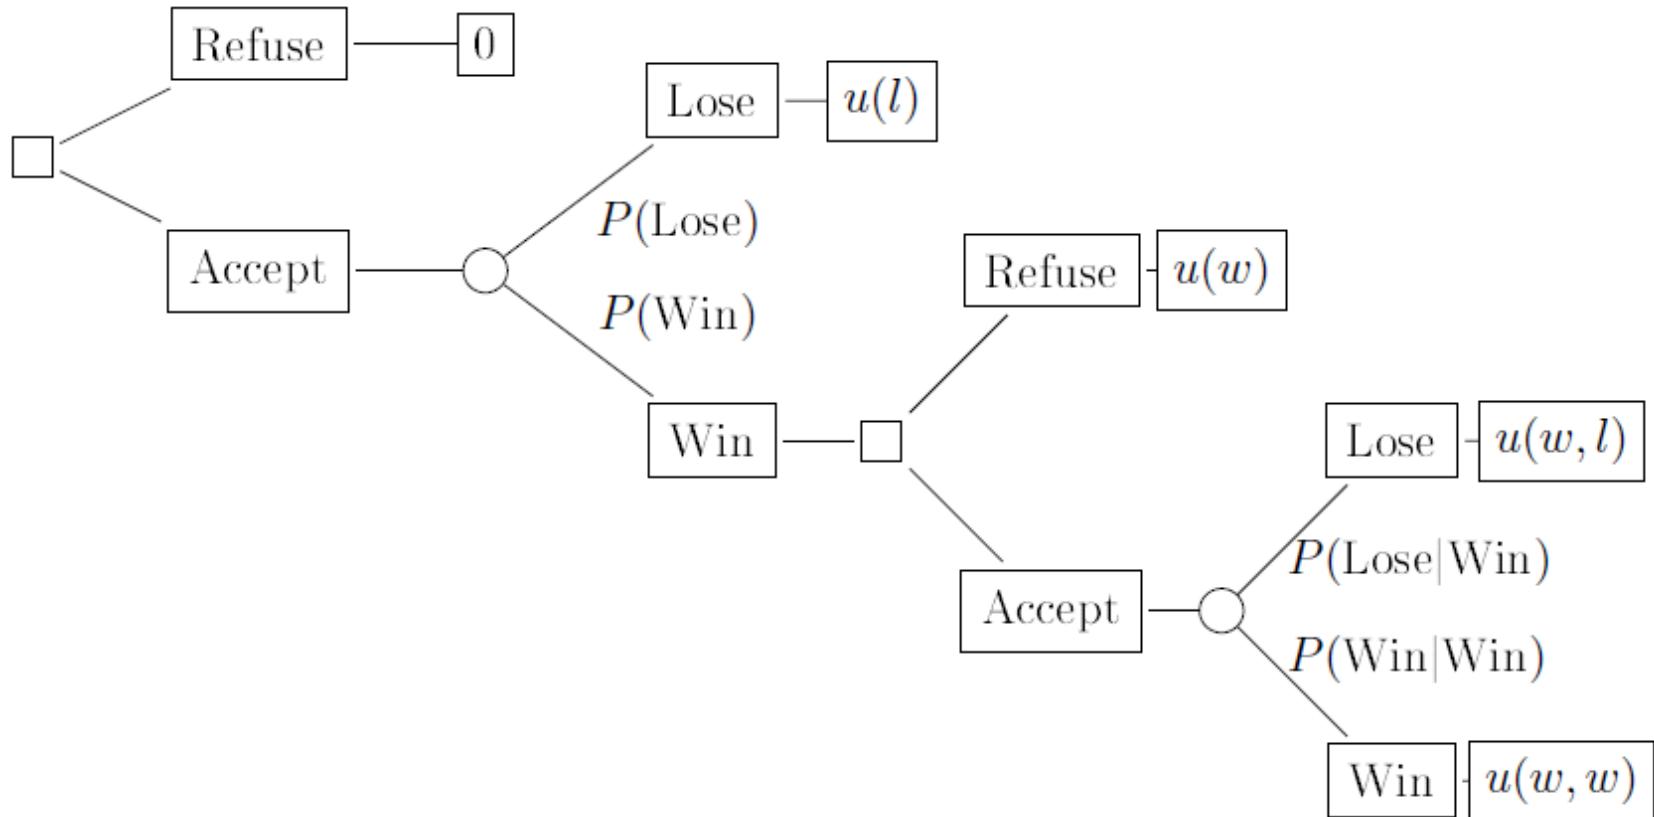

Fuzzy Numbers

- Special case of a Fuzzy Set with $A : \mathbb{R} \rightarrow [0,1]$

A fuzzy number representing a quantity “approximately in $[1.5, 2.5]$ ”

Decision Trees

Objectives of the Thesis

- Study extensions of decision trees using fuzzy arithmetics
- Examine methods to capture imprecision in estimated quantities
- Consider formation of fuzzy decision rules

Schedule

- Literary Review and Study 12/2014-1/2015
- Preliminary Definitions 1/2015
- Introduction of Topic 23.2.2015
- Write Thesis 3/2015-4/2015
- Presentation of Thesis 20.4.2015
